

Low Level Laser Therapy FREE Introductory Workshop

You will discover how low level laser therapy is highly effective for use in Acupuncture, in treating Muscular-Skeletal Pain, Lymphoedema, Sprained and Strained Ligaments, and more.

This professional development workshop is specifically designed for therapists. You will have the opportunity to hear about the Australian-made RianCorp LTU-904 laser therapy unit and learn techniques that can be used to effectively treat your patients.

TGA & FDA approved and carrying a CE mark, the hand-held unit has received an enormous amount of positive feedback from patients and therapists worldwide, particularly about the effectiveness, ease of use, and being non-invasive.

Ann Angel from RianCorp will give a presentation detailing:

- ◆ What is Low Level Laser Therapy? ◆ Dosage and treatment ◆ Types of laser
- ◆ How does LLLT work? ◆ Biological and physical effects ◆ Wavelength and beams ◆ Uses for LLLT ◆ Research

After the presentation, laser specialist Lyn Barnet will be available to answer treatment questions.

Why attend?

- Completely free with light refreshments on hand.
- Small groups where you can have the opportunity to ask plenty of questions and have a go using the laser yourself.
- Opportunity to add an exciting and extremely promising dimension to your clinic.
- Provide a point of difference from your competitors and increase your earning potential.
- Professional development to enhance your career.
- No obligation or direct sales pitch.
